

Our Pharmacy Team

How our specialist Pharmacy Team can support you with your medication in our Inpatient Units and in the community.

We have a dedicated Pharmacy Team of Specialist Pharmacists, Prescribers, and Technicians who spend time at the hospice and in the community.

Our Pharmacists are experts in addressing problems related to medicines, including symptom management and side effects. They are on hand to support and assist you with any queries about your medication.

Our Pharmacy Team can support you with:

- Talking to you about medications and how they are working.
- Reviewing and prescribing medication.
- Examining if any medicines will have interactions with each other.
- Any difficulties you have taking your medicines that you would like to discuss.

The team also support those staying in our Inpatient Unit with supplies of medication, information and monitoring to ensure they get the maximum benefit from prescribed medication.

If you are staying in our Inpatient Unit we ask that you bring in your medication, including any patches, creams and eye drops, as well as other products you buy and take regularly. This helps us understand what you usually take and how. It also helps prevent delays getting your medicine when you first arrive.

We are happy to help, please let us know if you would like to speak to the Pharmacy Team.
